

# NEWS BREAK

Volume 22, Number 4

May 2007

## MAY 2, 2007 MEETING

**If it's May, it must be Marra Month!**

### APPLE SENIOR ENGINEER DAVID MARRA

Join us on **Wednesday, May 2, 2007** at 7:30 p.m. in Hogdon IRC Lecture Hall #4 on the SUNY Oneonta campus, for our very special May MUG ONE meeting – with special door prizes, too.

Our favorite Apple presenter **Dave Marra**, Apple Senior Systems Engineer, will present an exciting evening exploring the new products recently released or soon to be released by Apple.

First, we will take an in-depth look at the soon to be released **iPhone** and the brand new **Apple TV**, as well as the next generation **AirPort Extreme** and the new **iPod shuffle**.

Following Dave's product update presentation, he will demonstrate **podcasting**, an exciting way to create, publish and distribute your own dynamic multimedia content from your home, office, or classroom.

With podcasting, anyone can have anywhere, anytime access to the latest audio and video content, on a Mac, on a Windows PC or on an iPod. Discover how easy it is to get started in the exciting world of podcasting today.

A special meeting calls for special **door prizes** (members only). In addition to our usual offerings, MUG ONE's former vice president Tom Fitzpatrick has donated some really special **Apple shirts** in a variety of sizes – thank you, Tom! And one lucky MUG ONE member will go home with a new (refurbished) **silver iPod shuffle!**

As always, you'll hear the latest news and helpful hints, and share refreshments with us after the presentation. MUG ONE library materials will be available for circulation to members at the meeting.

For directions to our meeting building and room, and for parking information, see <http://mugone.com/pages/map2007.html>

## SPRING MUG ONE MEETING SCHEDULE

June 3 – **Berlitz Language Software and Art Explosion 750,000**

July & August – **Summer break**

*Apple Senior Engineer Dave Marra joins us for his sixth MUG ONE presentation on May 2.*

## MAC OS 10.5 LEOPARD TO BE RELEASED IN OCTOBER

On April 12 Apple, Inc. announced that Mac OS X 10.5 Leopard will not be introduced at the Worldwide Developer Conference in June as originally planned. Instead, the release of the new operating system is scheduled to take place in October.

WWDC attendees will receive beta copies of Leopard at the June 11-15 conference in San Francisco, which will feature a keynote presentation by Steve Jobs.

Apple said the delay was caused by the need to borrow engineers from the Leopard project to work on the iPhone, which is scheduled to be rolled out in June.

### MUG ONE OFFICERS FOR 2006-2007

Elsa Travisano, President mugone@stny.rr.com	607/433-2569
John Maas, Vice President, Program Co-Chair xaxat@stny.rr.com	518/282-4725
Terry Helser, Sec. & OSC Liaison: helsertl@oneonta.edu	607/638-9885
Joanne Johnston, Treasurer ejohnston@stny.rr.com	607/432-6320
Sven Anderson, Program Co-Chair anderss@oneonta.edu	607/436-3174
Brian Foley, SIG Coordinator, Program Co-Chair foleymb@dmcom.net	607/988-7031
Mark Dye & Keith Robisch, Librarians

## APRIL 11, 2007 MEETING

### “Mac Tax Preparation Online” – Terry Helser

It was a damp and dark Wednesday, April 11 at 7:40 p.m. in Hodgdon IRC, Lecture Hall 4, when President Elsa Trivisano began by introducing herself and greeting the small but enthusiastic crowd. Before the last victim arrived, Brian Foley set up his mind reading trick by telling everyone the answers they were to give the person who came into the room after the audience had been prepped. After we decided to say Aunt Betty (for “think of a person”), the number 73 (“think of a number between 1 and 100”) and “Sitting on the dock of the Bay” (“think of a song”), in walked Bill Gruber. More on this later.

### Announcements

Elsa announced that May will be Marra Month again! On May 2, Dave will again take us on a whirlwind tour of the latest and best from Apple. Since he has yet to send Elsa a title for his talk, anticipation is high for a major announcement. [OK, so no major announcement has been made, but there will still plenty for Dave cover from the new products announced at January’s Macworld Expo. Ed.] We’ll have an extra special raffle, too! Adobe wants ten groups to host an interactive, Web based program featuring Terry White and Dave Helmsby. Elsa hopes to arrange for us to host one in May or for the June meeting, and reap the promised door prizes. [Because we received too short notice for publicizing the event, we’ve decided to delay the Adobe meeting until the fall. Ed.]

Bill Gruber donated several cables, headsets and older hardware items for the raffle, and has more to give or sell, if interested. Finally, Elsa described a strange problem with Huntington Library’s new wireless internet system not working with Safari – it does work with Firefox. If Elsa can’t solve it, what chance do any of us have? So it goes.

### Questions and Answers

The Q&A amounted to me asking how to keep Powerpoint from opening Internet Explorer instead of my preferred browser. The answer was to find the program under applications and drag it to the trash. If Powerpoint can’t find Internet Explorer (its default browser), then it will use your browser. FINALLY!

### Program

The program then started with yours truly handing out a sheet of pros and cons for TurboTax from Intuit (<http://turbotax.intuit.com>) and TaxCut Premium from H&R Block (<http://taxcut.com>). I also found another program, TaxAct from JK Lasser (Wiley at [https://www.taxactonline.com/s\\_online\\_tax2006/introduction/intro\\_index.asp](https://www.taxactonline.com/s_online_tax2006/introduction/intro_index.asp)), that I haven’t had time to explore well. I showed how I get a

print copy of my income and expenses with Quicken as a detailed category report, which I use to transfer dollar amounts into the tax program on line. We covered the choice of a program CD (higher cost), downloading it to your Mac (connect speed issues) or just doing it with a browser. I prefer the latter, but you don’t then have an electronic copy of the returns on your hard drive to import the next year. If you go back to the same program online, however, it will import flawlessly.

I then went through each company’s options and pricing, and showed a few screens to give a flavor of their interface. TaxCut has a very IRS form and dark side PC look and feel, and is not nearly as user friendly as the others. Even at half the price of TurboTax, I’ll not be switching. They also try to get the gullible to agree to let them use your tax information to send you spam. I don’t THINK so!

TurboTax is costly, but the most hassle-free and easy to use, in my experience. Intuit’s greed, displayed in multiple attempts to get the user to buy this service or that insurance, is a definite downer, and may lead me to look elsewhere next year.

Which brought me to <http://www.taxact.com> for their \$16 online program. What little I had time to look through, I liked, and you can’t beat the price. Give it a look, if you aren’t invested in another offering. With that I finished my presentation.

Brian Foley then tried to complete his pre-arranged mind reader trick by choosing Bill Gruber for the victim and asking him to get the name of a relative, a number between 1 and 100 and a song from the audience and write them down. Brian then correctly “guessed” Aunt Betty and the SF bay song, but Bill outsmarted Brian by putting down his own choice of number instead of getting it from someone else, so Brian was “close” on that one. See what fun times you missed by not coming to the meeting last month?

Next, we drew raffle tickets from my hat. All members picked from software, CD wallets donated by MacAddict, now Mac|Life, books, T-shirts, pens and other booty. The diet Pepsi, Sprite, ginger ale, peanut butter crisscross and Oreo® cookies disappeared as we all communed. Thanks to everyone who made it a successful program.

The next meeting will be our annual visit from Apple Senior Systems Engineer David M. Marra (hooray!) on Wednesday, May 2 at 7:30 pm in Hodgdon IRC, lecture hall 4. Please join us there, and be sure to invite your friends!

– TERRY L. HELSER, SECRETARY

## Special Offers from the Apple User Group Bulletin

These discounts are brought to you by the Apple User Group Advisory Board. You must be a current Apple user group member to qualify for these savings.

### SeeFile Software: 20% off

SeeFile 3.0 is a new Mac OS X application that lets creative pros share their work with clients, using their own Mac as a webserver. SeeFile creates private folders for clients (each with a private username and password) and creates live thumbnails of photos, PDFs, and videos. It is ideal for wedding and commercial photographers, design firms, videographers and print providers.

Specially priced at \$395, user group members receive 20% off the list price, for the five account entry version; upgrades and eCommerce options are available as well. Order by phone or email with the coupon code provided.

Coupon code: \*\*\*\*\*

Order by phone. (617) 262-2421

Order by email. [sam@seefile.com](mailto:sam@seefile.com)

<http://www.seefile.com>

This offer is valid through July 31, 2007.

### CrossOver Mac: 20% Off

CrossOver Mac allows you to run many popular Windows software applications on your Intel Mac. Your applications, documents and email attachments are seamlessly integrated into the Mac OS X. You work as you would in Windows, but with the freedom and ease of the Mac. You do it all easily and affordably, without needing a Windows license.

CrossOver Mac offers user group members a special price of \$47.96, a 20% discount off the regular price of \$59.95.

Special Code: \*\*\*\*\*

<https://www.codeweavers.com/store/>

This offer is valid through July 31, 2007.

### Ovolab Geophoto: 25% Off

Ovolab Geophoto is a new Mac OS X application for browsing and collecting digital pictures by location. You can now browse your photo albums by panning, zooming and flying through your pictures on a three-dimensional representation of the Earth. Once geotagged, photos can be shared with other users and will automatically appear in the correct location on the Earth when opened in Geophoto.

User group members can purchase Geophoto at the special price of \$14.95, 25% off the retail price of \$19.95.

Coupon code: \*\*\*\*\*

<http://www.ovolab.com/geophoto/>

This offer is valid through July 31, 2007.

### Mushkin Memory: Reseller Prices

Mushkin Perfect Match products for Apple are specifically designed for Mac users. They have been creating enhanced memory for more than a decade, and believe in providing the highest quality products at the best value. Mushkin PerfectMatch upgrades are the smart choice. They carefully select components and program each module to match the manufacturer-installed memory and provide guaranteed compatibility.

A user group web store is now available with the same pricing given to resellers (discounts of 20-40%) insuring the best possible price for all Mushkin Mac products.

Visit Mushkin's special User Group Store.

<http://www.mushkin.com/>

This offer is ongoing.

### FastMac: Major Discount on TruePower High Capacity iBook Batteries

Does your iBook lose its battery life extremely fast? Replace it with a new larger capacity and longer lasting TruePower battery. Every TruePower battery comes with a one-year warranty and 30-day money back guarantee.

Receive 20% off MSRP by using the following coupon codes on the FastMac store, or by mentioning the User Group when placing an order over the phone by calling (866) 416-FAST (3278).

- 12-inch iBook Battery - use coupon code \*\*\*\*\*

- 14-inch iBook Battery - use coupon code \*\*\*\*\*

<http://www.fastmac.com>

This offer is valid through July 30, 2007.

### MacAddict Reborn: 40% Off New Mac | Life

The Mac market has evolved, and so has MacAddict. Starting with the February 2007 issue, MacAddict has become Mac|Life, the new Mac magazine that changes all the rules. This publication recognizes Apple's dynamic role in work, play, and life, and will appeal to core Apple users. Features include in-depth how-tos, stunning design and exclusive information. Mac|Life is the ultimate magazine about all things Apple.

Mac|Life is offering a one-time Apple User Group member

## MAC 911 – HELP DESK

### Solutions to your most vexing Mac problems

By Christopher Breen and Ted Landau

#### Keeping Up-to-Date with iPhoto

I've noticed the calendar icon that appears in iPhoto 6's lower left corner, but I'm not sure how to put it to good use. Any recommendations? – Dale Carson

You've discovered the much-overlooked calendar feature in Apple's iPhoto 6, part of the \$79 iLife '06 suite. Click on this icon, and a list of months appears in the lower left corner of your iPhoto window. Select a month and then click on the small arrow to the left of the year to see a calendar view of that month.

The calendar provides some helpful ways to locate pictures in a crowded iPhoto library. For example, you can use it to find out in which months you shot pictures.

In year view, if the name of a month appears in black type, you shot pictures that month. If the name is in gray type, you didn't. The same idea applies to month view--days on which you took photos appear in black type; days on which you didn't appear in gray. Click on a date or month to reveal all the photos associated with that time period in the main iPhoto window.

You can also use the calendar to tally the number of pictures you took in a certain month or on a certain day. Hover your cursor over a month's name to reveal a tool tip indicating the number of pictures tagged for that month and year. For example, when I hover the cursor over April 2006, I see that I shot 217 photos that month. When you're in month view, hover over a date, and a tool tip reveals how many pictures you took that day (see "Photos by Date").

Here's a handy way to gather all the pictures you've taken for a recurring event--say, the winter holidays. Click on the triangle to the left of the year to reveal the month view. Then use the up arrow (next to the word Calendar) to move to December 2006. Click on the dot to the left of the week that includes your holiday event. This highlights that week. Move back to December 2005 and 1-click on the same special week. The past two years' worth of holiday pictures will now appear in iPhoto's main window.

Choose File: New Album From Selection and you've collected all your holiday photos in one place. If you want to be even more precise, choose specific days each month with this 1-click technique.

#### Group Think

In the January 2007 Geek Factor, "3 Amazing Apple-Scripts," I noticed that the author had seven iCal calendars subordinated under the category School. How do you make one or more calendars do this? – Tom Ballen

What you've witnessed is iCal's Group Calendar feature (found in the Mac OS X 10.4 version of Apple's iCal). To employ it, open iCal (in your /Applications folder) and choose File: New Calendar Group. A new group entry appears in iCal's Calendars list. You can organize your calendars by dragging them into this group. For example, put all your kids' calendars or collections of sports teams' schedules here.

The group calendar feature offers a couple of advantages. The first is that you can easily reveal or hide all the calendars within a group by selecting or deselecting the box next to the group's name. The second is that you can publish a group as a single calendar to your .Mac account or a WebDAV server (by choosing Calendar: Publish); this solves the age-old iCal problem of how to generate a Web-based calendar that includes only the events from a single calendar.

#### A Bit on Bit Rates

The AAC version of Macworld's podcast is larger than the MP3 version. I thought AAC was based on MPEG-4, which is supposed to provide the same quality as MP3 but better compression. What gives? – Gino Vogt

You've got it partly right. Apple claims that AAC files sound better than MP3 files encoded at the same bit rate, which is the number of bits per second used to encode audio, represented in kilobits per second (Kbps). But the files are no smaller--in fact, AAC and MP3 files encoded at the same bit rate are usually about the same size. AAC just provides better sound at this bit rate than its MP3 counterpart.

In the case of the Macworld podcast, we're using the same bit rate for both the AAC and the MP3 versions-- 32 Kbps with mono sound. I wouldn't dream of encoding music at such a low bit rate, but for speech, it's a perfectly fine compromise--particularly when you consider how long it would take to download 45 minutes of audio encoded at music quality (and what it would cost to host such large files).

The AAC version is a touch larger because it's an enhanced podcast--one that includes pictures, links, and chapters. (If you haven't yet listened to our podcast, you can give it a try.)

#### Moving GarageBand Loops

I am a huge fan of GarageBand. I have been using it for a

*continued on page 5*

– Mac 911, continued from page 4

few years now, and have only one major gripe. I've installed four GarageBand Jam Packs. These sound libraries take up a large chunk of my hard-drive space --nearly 17GB. I work on an iBook G4 that has only 25GB of available space. Is there any way to move these Jam Packs to an external drive? – Zach Paull

*There is.* Apple's GarageBand (part of the \$79 iLife '06 suite;) stores loops in two locations--/Library/Audio/Apple Loops and /Library/ Application Support/GarageBand/ Apple Loops.

Dig into these folders until you find the folders that hold specific Jam Packs: for example, Jam Pack 2 - Remix Tools and Jam Pack 4 - Symphony Orchestra. Copy these folders to your external drive by dragging them there. Then drag the original folders to the desktop.

GarageBand will give no indication that it can't find its loops until you try to use one of them. Then it will display a dialog box indicating that it hasn't a clue where they are and asking if you'd like to reindex your loops. Click on Cancel.

Now locate the Jam Pack folders that you copied to your external drive and drag them into GarageBand's Loop Browser. GarageBand will acknowledge that you're attempting to add loops to the browser and ask if you'd like to keep the loops in their current location or copy them to the Loops folder. The correct answer is Current Location. Test your configuration by selecting one of the Jam Packs from the browser loops pop-up menu (the one that normally reads My Loops), choosing a sound, and previewing it. If GarageBand won't play it and instead shows you that reindexing dialog box, let GarageBand reindex the loops this time.

Once you're sure everything is working as it should, you can toss out the original loops folders that you moved to the desktop.

### **Icon, Begone!**

How do I remove or hide the hard-drive icon in the upper right corner of my desktop? – Gene Dybinski

Choose Finder: Preferences and, in the resulting window, click on the General tab if it's not selected already. Here you'll see the option to show specific items on the desktop. Simply deselect the Hard Disks option and your hard-drive icon will disappear from the desktop. If you want to, you can also remove hard-drive icons from the Finder window's sidebar. Just click on the Sidebar tab in the Finder preferences pane and disable the Hard Disk option here as well.

Here's a little bonus tip: Just as it's easy to make icons dis-

appear from places where you don't want them, you can also make an item (a volume, a folder, an application, or a file) appear in more places than usual. To add an item to the toolbar at the top of every Finder window, for instance, drag it to an open Finder window's toolbar. Hold it there for a couple of seconds until you see a green plus sign (+). Then let go of the mouse button and the item's icon will appear in the toolbar (see "Easier Access"). Should you later wish to remove it, hold down the 1 key and drag it out of the toolbar.

### **DVD Conversion**

You paid good money for your commercial DVDs, and it takes little more than a five-year-old armed with a jar of jam to destroy them. Use these tools to back them up.

#### **HandBrake (free):**

I've tried just about every Mac DVD-ripping utility on earth. Many of them do a decent job, but they can't touch the complete capabilities that Eric Petit and Laurent Aima's tool offers for free. (For detailed instructions on how to use it to convert video for your iPod, see [macworld.com/1105](http://macworld.com/1105).) If you don't need HandBrake's many configuration options, choose its less full-featured sibling, Instant HandBrake (also free). Like HandBrake, Instant HandBrake can convert commercial DVDs to a format that's playable on your Mac, iPod, or Sony PSP.

#### **VisualHub (\$23):**

My love for Techspanion's universal video converter for the Mac is nearly boundless. VisualHub can convert almost any video format you throw at it to iPod, PSP, DV, DVD, TiVo, AVI, MP4, WMV, MPEG, and Flash formats. It can even fit up to 18 hours of video on one DVD-- though that video won't look pristine.

What does this have to do with your DVDs? Although Techspanion claims that VisualHub won't convert video from commercial DVDs, it has in many cases (though not always) done so successfully for me. For example, it ripped Master and Commander with no complaints but produced garbage when ripping my DVD collection of the first season of Arrested Development. (HandBrake had no problems with Arrested Development.)

Another bonus: VisualHub can help you put your converted content on a DVD (compressing it to fit on a single disc) and then burn it--no need to purchase additional tools such as Roxio's \$100 Toast or \$50 Popcorn 2 or Erwin van den Berg's €40 DVD2oneX2. Both of these utilities, however, do provide more flexible DVD-burning options than VisualHub.

#### **Bug: Firefox Security Breach**

Like most Web browsers, Mozilla's free Firefox () lets you

*continued on page 6*

– Mac 911, continued from page 5

save passwords for sites that require you to log in. (Go to Firefox: Preferences, click on Security, and select the Remember Passwords For Sites option.) Firefox should enter your name and password only when you're at the appropriate login page. However, a security weakness allows a phony login page, located on the same server as the legitimate one (possible on sites such as MySpace.com), to obtain and send your password information to another site without your knowledge. It's a low-risk threat, but for now the only way to make sure no one can steal your passwords is to deselect the password option. To get rid of passwords you've already saved, click on the Show Passwords button and then click on Remove All.

Some users (including myself) have found that Safari reveals the same weakness. Use this test page to assess your browser's vulnerability.

#### **Fix: QX-Tools Pro and Quark conflict**

If you're using onOne Software's \$100 QX-Tools Pro 7.0, QuarkXPress 7 may crash when you save certain--primarily older--files. Fix this minor bug by updating to QX-Tools Pro 7.0.1 or later.

#### **Bug: iPhoto Import Problem**

Apple's iPhoto may quit unexpectedly when importing movie files from a still camera. The likely cause is a problematic third-party QuickTime plug-in. Check the your user folder/Library/QuickTime/ and /Library/ QuickTime/ folders for plug-ins not installed by Mac OS X. Remove any that you find. Log out and log back in. If the problem disappears, a plug-in was the culprit. If not, use another program, such as Image Capture (/Applications), to import the movie instead.

#### **Bug: Adobe's Vietnam danger**

Do you use the \$599 Adobe Photoshop CS2 () or \$499 Adobe Illustrator CS2 ()? Check the /Applications/Adobe Photoshop CS2/Legal.localized/ and /Applications/Adobe Illustrator CS2/Legal.localized/ folders for a file called *Tieng Viêt.html*. If you find this file, delete it immediately. OS X can interpret the special characters as illegal file names, resulting in damage to your drive's directory that even Disk Utility's First Aid feature (/Applications/Utilities) can't fix. If you already have this damage, you'll probably get an error message that says "The underlying task reported failure" with a -9972 error code) when you run First Aid. If so, try another repair utility, such as Alsoft's \$100 DiskWarrior, or completely erase your drive and start over.

When you try to delete the *Tieng Viêt.html* file, you may get the following odd message: "The operation cannot be completed because one or more items cannot be found. (Error code -43)." If so, the solution is to restart your Mac in Safe Mode, by holding down the Shift key from imme-

diately after you hear the startup tone until the gray Apple logo appears. You should now be able to delete the file. After doing so, restart again normally.

#### **Bug: Sync problems**

If you use the Sync pane in .Mac's preferences pane, you may get a message that says: "There was a problem with the sync operation. .Mac legacy client exited abnormally." There may be an easy fix--open Disk Utility (/Applications/Utilities) and click on Repair Disk Permissions. If that doesn't work, you can try reinstalling Mac OS X completely, using the Archive And Install option.

## **MACBOOK AND MACBOOK PRO BATTERY UPDATE (FROM APPLE SUPPORT)**

"Apple has recently discovered that some batteries used in its MacBook and MacBook Pro notebooks may have battery performance issues. Apple is offering a software update that is designed to improve battery performance.

The battery update is available immediately via Software Update or downloadable [here](#).

Note: The factors causing the performance issues do not present a safety risk. You may continue to use your current battery.

This battery update should be run on all MacBook and MacBook Pro computers and extra batteries that were purchased between February 2006 and April 2007.

If, after you have installed the battery update, your battery has any of the symptoms listed below, please make a reservation to bring your computer with its battery to your local Apple Retail Store, or contact an Apple Authorized Service Provider (AASP), or call your local Apple Support Contact Center. If Apple or an AASP determines that your battery is eligible for replacement, you will receive a new battery, free of charge, even if your MacBook or MacBook Pro is out of warranty.

*For MacBook and MacBook Pro systems with Intel Core Duo processors, this program extends repair coverage on the battery for up to two years from the date of purchase of the computer."*

For the full article, see [http://www.apple.com/support/macbook\\_macbookpro/batteryupdate/](http://www.apple.com/support/macbook_macbookpro/batteryupdate/)
